Today we're going to talk about a fundamental part of all modern computers. The thing that basically everything else uses - the ALU. In this video we go over the design for the Arithmetic and Logic Unit for our 8-bit processor. Description of the basic functionality of an ALU. The ALU is a digital circuit that performs arithmetic and logic operations on two 8-bit numbers. It takes two 8-bit inputs, A and B, and a carry-in input. It performs operations such as addition, subtraction, multiplication, division, and logical operations like AND, OR, XOR, and NOT. The ALU produces an 8-bit output and a carry-out. The ALU is a critical component of the CPU, and its performance directly affects the overall performance of the system.
